

# 10 Year Guarantee

## ALTON TEN YEAR GUARANTEE

Alton Greenhouses are manufactured from the finest Canadian Western Red Cedar – a managed and replanted natural resource.

If any part of your Alton Greenhouse cedar framework rots or decays within ten years of purchase, Alton will replace it promptly and free of charge.

This free guarantee is in addition to your statutory rights and is not conditional upon you re-treating the cedar frame

# AFTER CARE

Western Red Cedar is extremely resistant to rot, even so it is recommended that the timbers are treated with water repellent periodically. This treatment will restore colour and 'top up' protection. The length of time between treatments is dependent on site conditions, but is typically every two or three years.

The timber should be washed down inside and out with a little domestic detergent, using a firm bristle brush.

A hose would be most useful in this situation.

Allow the timber to dry out completely, then apply a proprietary cedar treatment, following the manufacturer's instructions. **Do not** use varnish or similar substances.

The external treatment should keep the timber in first class condition. Internal treatment is a matter of personal preference, however, internal treatment should be applied out of the growing season.

The glass should be cleaned as appropriate to maximize the available sunlight.

The gutters should be cleared of leaves and other debris as required, to allow free flow of rainwater.

The door rollers should be oiled annually to reduce the risk of them binding.

For maintenance on auto vent and louvre openers, please refer to manufacturer instructions.
